# SuperGrip™

## How to do it:

### Start

Hold the trunk of the tree and push the tree towards the spike in the bottom of the stand.

### Position

Lift the tree together with the stand a few inches from the floor – push it firmly against the floor, placing the tree onto the brass spike.

### Release

The tree goes easily out of the stand – just hold it in a firm grip and turn the trunk anti-clockwise. Lift out.

# SuperGrip™

Quicker and simpler!

The tree stands  
straight after  
only 10 seconds!  
No screws,  
no pedals,  
no rust!
